2026 年 2 月 18 日

1 概要説明

私たちのグループは、シンプルなシューティングゲームを作成しました。画面上部から敵がランダムに降りてきて攻撃します。敵を躊躇したり、矢を放って敵を迎撃します。敵を倒すことでスコアが上昇し、一定のスコアに達するとボスが登場します。各ステージのボスを倒すことで、次のステージに移動します。ボスを倒すとそのキャラの特殊スキルを自分の能力として使うことができるようになります。プレイヤーのライフが 0になるとゲームオーバーです。

基本的なキー操作は移動と攻撃で、カーソルキーで移動し、Space キーで矢を放って攻撃します。プレイ中に一時停止することも可能です。

プレイヤーのライフは 3 が上限で、敵に当たるか敵の攻撃を受けると 1 減ります。ボスが登場したタイミングと、ボスを倒して次のステージに進んだタイミングでライフが全回復します。

プレイ画面の上部には、現在のスコアとステージ数、プレイヤーの残りライフが表示されています。特殊スキルは画面下部に順次追加されます。

図 1: プレイ画面

MVC モデルを採用し、主に Puller が M、佐々木が V、斎藤が C を担当しました。プログラムのコードは GitHub で管理しました。また、「実装予定機能リスト」を作成し、未開発の機能を赤、開発中の機能をオレンジ、開発済みの機能を緑にし、開発中の機能の最後に『(名前)』を書いて、誰が今どの機能を開発中なのかを一目で把握できるようにしました。

2 設計方針

3 プログラムの説明

3.1 斎藤担当

私が作成したのは、コントローラーと第二ボス Zeus の実装です。

3.1.1 コントローラーの実装

Listing 1: GamePanel.java (一部抜粋)

```
1  private void updatePlayerVelocity() {
2      Player p = model.getPlayer();
3
4      int vx = 0;
5      int vy = 0;
6
7      if (leftPressed && !rightPressed) vx = -1;
8      if (rightPressed && !leftPressed) vx = 1;
9      if (upPressed && !downPressed) vy = -1;
10     if (downPressed && !upPressed) vy = 1;
11
12     p.setVelX(vx);
13     p.setVelY(vy);
14 }
15
16 // Reset keys when restarting game
17 private void resetKeyState() {
18     leftPressed = false;
19     rightPressed = false;
20     upPressed = false;
```

```

21     downPressed = false;
22
23     Player p = model.getPlayer();
24     if (p != null) {
25         p.setVelX(0);
26         p.setVelY(0);
27     }
28 }
```

キー操作は、使用するキーが押されている状態か押されていない状態かを true,false で表して処理しています。updatePlayerVelocity では、変数 vx,vy を用いて、キーが押された方向に Player が上下左右に動くことができるようとした。例えば、左のカーソルキーだけ押されている状態であれば、Player は左に移動することとなり、座標としては、負の方向に進むはずなので vx=-1 となるようにした。キー操作の入力を検知してから、vx,vy を変更するという操作をすると、方向転換の時に、止まってしまってうまく方向転換ができなかった。しかし、true,false の判別によりそれを解消することができ、より滑らかなキー操作が可能になった。

続いて、resetKeyState です。ここは、ゲームを再開したり、ゲームオーバーになってゲームを新しく始めるときなどの状態を初期化するときに、用いるプログラムです。ここは、上で説明したプログラムで変更した状態を元の状態に変更します。元の状態に変更しないと再開と同時に Player が動き始めてしまうので、方向キーの状態は、全て false にし、変数 vx,vy も 0 に戻します。

Listing 2: GamePanel.java (一部抜粋)

```

1  @Override
2  public void keyPressed(KeyEvent e) {
3      int key = e.getKeyCode();
4      GameState state = model.getState();
5
6      // Title Screen Input
7      if (state == GameState.TITLE) {
8          if (key == KeyEvent.VK_SPACE) {
9              model.initGame(); // Start Game
10             startTime = System.currentTimeMillis();
11             endTime = 0;
12         }
13     }
```

```

14
15     // Playing State Input
16     else if (state == GameState.PLAYING) {
17         if (key == KeyEvent.VK_LEFT) leftPressed = true;
18         if (key == KeyEvent.VK_RIGHT) rightPressed = true;
19         if (key == KeyEvent.VK_UP) upPressed = true;
20         if (key == KeyEvent.VK_DOWN) downPressed = true;
21
22         if (key == KeyEvent.VK_SPACE) {
23             model.setFiring(true);
24         }
25
26         if (key == KeyEvent.VK_P) {
27             model.setState(GameState.PAUSED);
28             resetKeyState();
29             System.out.println("Game Paused");
30         }
31
32         updatePlayerVelocity();
33
34         // Placeholder for Abilities
35         // ABILITY 1
36         if(model.getCurrentLevelIndex() > 3 && key == KeyEvent.VK_1) {
37             model.ability1();
38         }
39
40         // ABILITY 2
41         if (model.getCurrentLevelIndex() > 7 && key == KeyEvent.VK_2) {
42             model.ability2();
43         }
44
45         // ABILITY 3
46         if (key == KeyEvent.VK_3) System.out.println("Ability 3 pressed");
47     }
48
49     else if (state == GameState.PAUSED) {
50         if (key == KeyEvent.VK_P) {
51             model.setState(GameState.PLAYING);
52             resetKeyState();
53             System.out.println("Game Resumed");

```

```

54         }
55     }
56
57     else if (state == GameState.MESSAGE) {
58         if (key == KeyEvent.VK_SPACE) {
59             model.resumeGame(); // Go back to Playing
60             resetKeyState();
61         }
62     }
63
64     // Game Over State Input
65     else if (state == GameState.GAMEOVER) {
66         if (key == KeyEvent.VK_C) {
67             model.initGame(); // Retry
68             resetKeyState();
69             startTime = System.currentTimeMillis();
70             endTime = 0;
71         } else if (key == KeyEvent.VK_Q) {
72             System.exit(0); // Quit App
73         }
74     }
75 }
```

今まででは、Player の移動の操作をしました。keyPressed では、移動以外の処理を行なっています。ここでは、Game の状態に合わせて条件分岐処理を行っています。

ゲームのタイトルが出ている時は、スペースキーを押してスタートするような仕様にしているので、7,8 行目のように、ゲームの状態が TITLE の時に、スペースキーを押されたら、ゲーム開始するようにしています。

続いて、16 行目から 47 行目です。ゲームをしている時は、Player の移動だけではなく、矢を放ったり、一時停止や、特殊能力まであり、ここもこれら全て条件分岐で処理をしています。まず、移動は、キーが押されたときの処理を行っているため、押されている方向キーのところは全て true に変更しています。そして、方向キーの押されているかの処理を終えた後、Player が動かないといけないので、updatePlayerVelocity を実行し、方向キーの変更を移動という形で表せるようにした。他の動作については、動作にあったキーを押された時に、その動作のクラスを呼び出します。

以降、他の状態については、その状態に操作できるキーが押されて時は、その動作ができるメソッドを呼び出して処理できるようにしています。

Listing 3: GamePanel.java (一部抜粋)

```
1  @Override
2  public void keyReleased(KeyEvent e) {
3      int key = e.getKeyCode();
4      if (key == KeyEvent.VK_LEFT) leftPressed = false;
5      if (key == KeyEvent.VK_RIGHT) rightPressed = false;
6      if (key == KeyEvent.VK_UP) upPressed = false;
7      if (key == KeyEvent.VK_DOWN) downPressed = false;
8
9      if (key == KeyEvent.VK_SPACE) {
10         model.setFiring(false);
11     }
12     if (model.getState() == GameState.PLAYING) {
13         updatePlayerVelocity();
14     }
15 }
```

このクラスは、keyPressed で行われた変更を元の状態に戻します。このようにすることで、毎フレーム押された状態だけを処理することができます。

3.1.2 第二ボス Zeus の実装

第二ボス Zeus の実装は、Zeus 本体と Zeus が攻撃する雷 (Lighting) の二つのファイルを作成して実装しました。まず、本体についてです。

Listing 4: Zeus.java (一部抜粋)

```
1  public class Zeus extends Boss {
```

Listing 5: Zeus.java (一部抜粋)

```
1  @Override
2  public void move() {
3      super.move();
4      if (ability2Timer > 0 || ability1Phase){
5          if (ability1Timer > 0) {
6              // Update horizontal position
7              x += speedX;
8
9              // Bounce logic: If it hits the screen edges
10             if (x <= 0 ) {
```

```

11         x = 0;
12         speedX = -speedX; // Reverse direction
13         ability1Timer--;
14     } else if (x >= GameConstants.WINDOW_WIDTH - width) {
15         x = GameConstants.WINDOW_WIDTH - width;
16         speedX = -speedX; // Reverse direction
17         ability1Timer--;
18     }
19     if(shootTimer <= 0){
20         shootLighting();
21         resetShootTimer();
22     }
23     shootTimer--;
24 } else if (ability1Pause <= 0){
25     ability1();
26 } else {
27     ability1Pause--;
28 }
29 } else {
30     if (!ability2Started) {
31         if (Math.random() < 0.5) {
32             x = 0;
33             speedX = GameConstants.ZEUS_SPEED2;
34         } else {
35             x = GameConstants.WINDOW_WIDTH - width;
36             speedX = -GameConstants.ZEUS_SPEED2;
37         }
38         Random random = new Random();
39         ability2Repetitions = random.nextInt(3) + 1;
40         ability2Started = true;
41     }
42     x += speedX;

43
44     if (((x < (GameConstants.PLAYER_WIDTH - 20)) && (speedX < 0)) || (
45 x > (GameConstants.WINDOW_WIDTH - (width + GameConstants.PLAYER_WIDTH)) &&
46 speedX > 0)){
47         } else {
48             shootLighting();
49         }
50     }
51 }
```

```

49     if (x <= 0) {
50         x = 0;
51         speedX = -speedX; // Reverse direction
52         ability2Repetitions--;
53     } else if (x >= GameConstants.WINDOW_WIDTH - width) {
54         x = GameConstants.WINDOW_WIDTH - width;
55         speedX = -speedX; // Reverse direction
56         ability2Repetitions--;
57     }
58     if (ability2Repetitions == 0){
59         ability2Timer = GameConstants.ZEUS_ABILITY2_TIMER;
60         ability2Started = false;
61         resetShootTimer();
62     }
63
64 }
65
66     if (secondPhase && ability2Timer > 0){
67         ability2Timer--;
68     }
69 }
```

この Zeus.java は、Boss を継承したクラスです。通常攻撃としては、2 種類あります。それを ability1, ability2 として表しています。そして、このボスは、第一段階と第二段階 (secondPhase) の二つの状態を持っています。move メソッドでは、ability2 を発動していない時は、画面の端に行ったら折り返しながら、攻撃をするという動きをしています。そして、ability2 は、画面の端から端まで素早く動きながら攻撃し続けます。この端から恥まで動く動きを random を用いてランダムに決めています。この move メソッドの工夫点としては、変数 isSecondPhase と ability2Started の用意である。ability2 が発動できる状態になったら、ability2Started を true にし、そうでなければ false にしておくことで、簡単に Zeus が ability1 を使うのか、ability2 を使うのかを判別することができる。また、同様に、isSecondPhase により、Zeus の第二段階にいるかをこれによって判別することができることで、それぞれの段階の攻撃を用意することが容易にできた。

次に、雷 (Lighting) についてです。

Listing 6: Lighting.java (一部抜粋)

```

1 public class Lighting extends BossProjectile {
2 }
```

```

3   private int vely;
4
5   public Lighting(int x, int y, int ZeusSpeedX, boolean isSecondPhase,
6     boolean friendly, boolean ability2Started) {
7     super(0,
8       0,
9       GameConstants.LIGHTING_WIDTH,
10      GameConstants.LIGHTING_HEIGHT,
11      isSecondPhase ? ResourceManager.lightingImg2 : ResourceManager
12      .lightingImg,
13      friendly ? Alignment.PLAYER : Alignment.ENEMY,
14      3,
15      GameConstants.LIGHTING_DAMAGE);
16
17
18      this.isPlayerProjectile = friendly;
19      this.isPenetrating = true;
20
21
22      if (isSecondPhase) {
23        vely = GameConstants.LIGHTING_SPEED2;
24      } else {
25        vely = GameConstants.LIGHTING_SPEED1;
26      }
27
28
29      if(isPlayerProjectile){
30        vely = -vely;
31        maxHP = GameConstants.LIGHTING_HP;
32        currentHP = maxHP;
33        // set position for player
34        this.x = x + (GameConstants.PLAYER_WIDTH - width) / 2;
35        this.y = y - GameConstants.PLAYER_HEIGHT;
36      } else {
37        if (!ability2Started){
38
39          // set position for Zeus
40          this.x = (ZeusSpeedX > 0) ? x + GameConstants.ZEUS_WIDTH - width :
41          x + width;
42        } else {
43          this.x = (ZeusSpeedX > 0) ? x : x + GameConstants.ZEUS_WIDTH -
44          width;
45        }
46        this.y = y + height;

```

```

39     }
40 }
41
42     @Override
43     public void move() {
44         y += vely;
45
46         if (y > GameConstants.HUD_HEIGHT + GameConstants.FIELD_HEIGHT || y <
47             GameConstants.HUD_HEIGHT - height) {
48             isDead = true;
49         }
50     }

```

Lighting は、Zeus の攻撃手段であり、Zeus を倒すと、Player の特殊能力にもなります。そのため、friendly という変数を用意することで、同じ Lighting でも Player の攻撃として用いたり、Boss の攻撃としても用いることができます。この変数を追加することで、Lighting を味方用と、ボス用と二つファイルを作らずに、一つのファイルで完結させることができました。また、変数 isSecondPhase により、第二段階に入ったことが判別できる。第二段階に入ったときに、画像を変えることで Lighting でもより強く見せることができました。このような変化を加えることで、ゲーム性が増しました。

(文責：齋藤)

3.2 佐々木担当

私は主に View 層における UI の実装と、Model 層におけるプレイヤーのライフ・ダメージ処理を担当しました。

1. ゲーム画面および HUD の実装

ユーザーが直感的に状況を把握できるよう、ゲームの状態に応じた画面遷移を実装しました。具体的には、ゲーム起動時の「タイトル画面」、操作説明を含む「スタート画面」、そして「ゲームオーバー画面」を作成しました。ゲームオーバー時には最終スコアを表示し、キー入力 (C で継続、Q で終了) によって次のアクションを選択できる機能を設けています。また、プレイ画面上部の HUD では、現在のスコア、進行中のステージ数、およびプレイヤーの残りライフをリアルタイムで表示するようにしました。ライフは数字ではなくハートのアイコンを用いることで、視認性を高めています。

Listing 7: HUD の描画 (GamePanel.java)

```

1  public class GamePanel extends JPanel implements KeyListener {
2      private void drawTopHUD(Graphics g) {
3          // Draw dark background bar
4          g.setColor(new Color(50, 50, 80));
5          g.fillRect(0, 0, GameConstants.WINDOW_WIDTH, GameConstants.
6          HUD_HEIGHT);
7
8          // Draw white separator line
9          g.setColor(Color.WHITE);
10         g.drawLine(0, GameConstants.HUD_HEIGHT, GameConstants.WINDOW_WIDTH
11         , GameConstants.HUD_HEIGHT);
12
13         // Font settings
14         setPixelFont(g, 18f);
15         int textY = 35;
16
17         // A. Score
18         g.drawString("SCORE:" + model.getScore(), 10, textY);
19
20         // B. Stage (Centered)
21         String stageText = model.getStageText();
22         int stageX = (GameConstants.WINDOW_WIDTH - g.getFontMetrics().
23         stringWidth(stageText)) / 2;
24         g.drawString(stageText, stageX, textY);
25
26         // C. Hearts / Lives (Right aligned)
27         int maxLives = GameConstants.PLAYER_MAX_LIVES;
28         int currentLives = model.getLives();
29         int heartSize = 32;
30         int spacing = 8;
31         int startX = GameConstants.WINDOW_WIDTH - 20 - (maxLives * (
32             heartSize + spacing));
33         int heartY = (GameConstants.HUD_HEIGHT - heartSize) / 2;
34
35         for (int i = 0; i < maxLives; i++) {
36             // Determine which icon to draw (Full or Empty)
37             BufferedImage icon = (i < currentLives) ? ResourceManager.
38             heartFullImg : ResourceManager.heartEmptyImg;

42 heartSize, heartSize);
43         }
44     }

```

2、ライフ制度と無敵時間の導入

ゲームの難易度調整とプレイ体験の向上のため、プレイヤーに3つのライフを付与するシステムを構築しました。初期の実装では、敵や弾に接触した際、当たり判定が連続して発生しライフが一瞬で0になってしまう「多段ヒット」の問題が発生していました。これを解消するために、ダメージを受けた直後に一定時間の「無敵時間(クールタイム)」を導入しました。ダメージ発生時に damageTimer をセットし、このタイマーが作動している間は新たなダメージを受け付けないように処理を分岐させています。さらに、無敵時間中はプレイヤーキャラクターを点滅させることで、視覚的にもダメージを受けたことと無敵状態であることをユーザーが理解しやすいようにしました。

Listing 8: ライフとタイマーの定義・初期化 (GameModel.java)

```

1  public class GameModel {
2      // 追加ライフ機能用変数:
3      private int lives; // 初期ライフ
4      private int damageTimer; // ダメージを受けた後の無敵時間（フレーム数）
5
6      public void initGame() {
7          // 追加ライフ初期化:
8          lives = GameConstants.PLAYER_MAX_LIVES;
9          damageTimer = 0;
10     }
11 }

```

Listing 9: 無敵時間のカウントダウン処理 (GameModel.java)

```

1  public class GameModel {

```

```
2     public void update() {
3         // 無敵時間の更新
4         if (damageTimer > 0) {
5             damageTimer--;
6         }
7     }
8
9     // ダメージ処理メソッド
10    private void playerTakesDamage() {
11        if (damageTimer == 0) { // 無敵時間中でなければダメージ
12            lives--;
13            damageTimer = 120; // フレーム（約秒）無敵にする 1803
14            System.out.println("Damage taken! Lives remaining: " + lives);
15
16            if (lives <= 0) {
17                state = GameState.GAMEOVER;
18                System.out.println("GAME OVER");
19            }
20        }
21    }
22 }
```

5 考察

6 感想

6.1 齋藤

この授業で、初めて Java について学んだ。Java は、基本的な構文は、C 言語に似ていたがオブジェクト指向型プログラミングを初めて習ったので難しく感じた。しかし、グループ内課題でプログラミングをやっていると、オブジェクト指向の便利さに気づいた。例えば、継承である。継承は、親クラスの内容を引き継ぐ子クラスに行うものであり、それが今回のシューティングゲームを開発している時に、重要となった。なぜなら、このゲーム開発では、player, Boss, Arrow, 雑魚敵など様々なキャラクターやオブジェクトが登場してきて、それらを全て一から書くのが大変だから、GameObject と全体に共通するものを書いて大きなグループを作り、そこから派生して、Boss, BossProjectile など細かいグループを作ってコードを作成できることが、整理しやすくそれが作成のしやすさに繋がっていたからである。

私は、MVC モデルの C と M の一部を担当しました。C では、Player の上下左右の移動や、矢を放ったり、特殊能力を放つなどのさまざま操作ができるようにしました。Player の移動の際に、1 フレーム毎に縦、横の 4 方向しか移動が出来ないので、スムーズに斜めに移動することができるようになるなど、移動方向を増やしてみたいと思った。

この授業を通して、Java の基本的なことから実践まで学べるようになっていることが、他の授業には良い点であると思った。実践的な練習することで、プログラミングの理解が広がるだけではなく、周りとコミュニケーションを取り、進捗を確認し合いながら進めることは、この授業で初めて行ったことであり、今後に活かすことができる経験であった。

6.2 佐々木

本授業を通じて、初めての Java の学習から始まり、最終的にはグループでのゲーム開発という実践的な演習に取り組みました。Java 特有のオブジェクト指向における「継承」の概念は、初めは難しかったものの、開発が進むにつれてコードの再利用性を高めるために不可欠な技術であることを実感しました。

開発手法としては MVC モデルを採用し、私は主に V と M の一部を担当しました。具体的には、ゲームの入り口となるタイトル画面やスタート画面、そしてプレイ画面やゲームオーバー画面といった UI 全般の実装に注力しました。単にグラフィックを表示するだけでなく、ゲームの状態に応じて動的に表示を切り替えるロジック部分の構築も経験し、UI と内部処理がどう連携すべきかを深く意識することができました。

また、GitHub を用いた共同開発も初めての経験でした。ブランチの管理やコンフリクトの解消など、個人開発では味わえない困難もありましたが、チームで一つのソースコードを育て上げる過程でバージョン管理の重要性を学びました。技術的な習得だけでなく、メンバーと協力して一つのプロジェクトを完遂する難しさと喜びを知ることができ、非常に実りある経験となりました。

7 付録 1：操作法マニュアル

ゲームを起動すると、タイトル画面が出てきます。Space キーを押してスタート画面に移り、再度 Space キーを押すことでゲームが始まります。

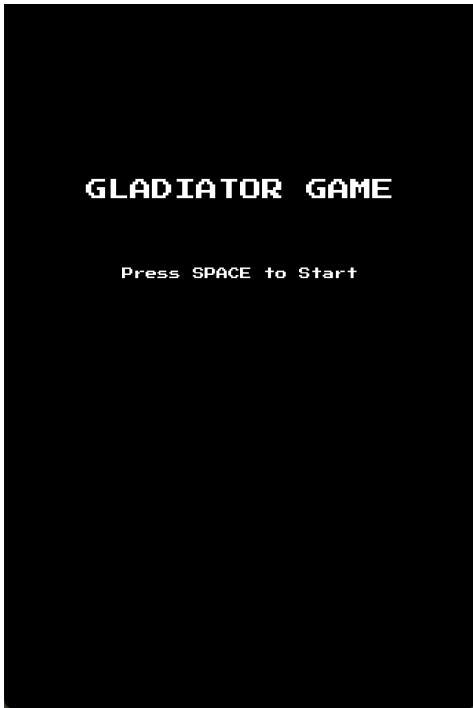

図 18: タイトル画面

図 19: スタート画面

次に、プレイ中のキー操作について説明します。

表 1: プレイ中のキー操作

移動	カーソルキー	画面全体を縦横無尽に移動。
攻撃	Space キー	長押しで連射が可能。
一時停止、再開	P	プレイ中に押すことでゲームを一時停止、再度押すことでゲームを再開。
特殊スキル	1,2,3	各ステージのボスを倒すことで手に入る特殊スキルは、それぞれ 1,2,3 を押すことで発動。

ゲームオーバー時には、C を押すとゲームをもう一度プレイ (Continue) でき、Q を押すとゲームをやめる (Quit) ことができます。
